TEMPE AZ, Silkeborg DK (21 June 2011) Mobility Research Inc is pleased to announce the product launch of both *FreeDome* and the *iHarness* system, and the CE approval of the *Hand* and *Foot Mentor* products, at the 16th International WCPT Congress in Amsterdam Netherlands. FreeDome allows expanded gait therapy options by providing the ability for patients to rotate within the support of the LiteGait® environment. The *iHarness* provides the same appropriate supported body position as our standard LiteGait harness, but is impermeable to moisture and is easier to clean. Finally, CE approval of the Hand and Foot Mentor allows our Mobility Research European subsidiary to bring active repetitive movement therapy solutions to our European customers.

These new products continue Mobility Research's 20 year history of providing innovative *Products, Education and Rehabilitation* solutions to rehabilitation clinicians worldwide. For additional information, please visit <http://litegait.com/newproducts.html>

About Mobility Research: As a pioneer in the Partial Weight Bearing Gait therapy solutions, we manufacture the LiteGait family of products, used in treating spinal cord injury, stroke, head injury, cerebral palsy, chronic pain, amputation orthopedic problems, balance issues, multiple sclerosis, and arthritis.

We are a company of rehabilitation professionals dedicated to the transfer of the latest technology and research knowledge to the rehabilitation arena. Our team of clinicians, researchers, educators, and engineers provide products, education, and rehabilitation solutions for pediatric and adult populations with motor control related disabilities.
